TURNIP, SAKATA'S TOKYO MARKET

In our last bulletin we brought to your attention a new Japanese Turnip, Sakata's Earliest White Flat, which offers certain advantages over Shogoin in that the root is flatter and the growth a trifle faster, making it most desirable for very late Spring or very early Fall planting as hot weather does not retard the growth.

Above we show you Sakata's Tokyo Market which enjoys considerable popularity in the South where it is called by many Salad Turnip. The roots are pure white, about 1½ inches in diameter, slightly flattened in shape. The tap root is unusually fine, the foliage luxuriant and heavy, but not as large as Shogoin although equally as upright. The quick germination and rapid growth are noteworthy. We have observed in our own germinator that samples show strong healthy sprouts the morning after they are placed in test. Florida friends report to us that they have used the plant as a Salad Turnip between 2 and 3 weeks after planting.

Illustrations and electros are available for catalogue use.

ALL-DOUBLE PETUNIAS

SAKATA'S ALL-DOUBLE GIANT FRINGED STRAINS represent the highest horticultural accomplishment in this field. Aeknowledged by countless testimonials to be 100% double, of stocky, healthy habit, and profuse bloom, little can be added. Flowers frequently exceed five inches in diameter and are exquisitely ruffled and fringed in a vast range of brilliant and intermediate colors. Being real money makers, they are in strong demand by florists. There are two strains:
